

**energySMART**  
A Elizabethtown Gas program

## Save energy. Save money!

Elizabethtown Gas is proud to offer energySMART, a program designed to help customers like you conserve energy, reduce your carbon footprint and save on your energy bills without sacrificing comfort, style or convenience.

Combined with programs and incentives from New Jersey's Clean Energy Program, we're helping to make efficiency affordable! You can reduce your energy consumption and save money with rebates on new, energy-efficient appliances.

Visit [elizabethtowngas.com/energysmart](http://elizabethtowngas.com/energysmart) for details.

# Save up to \$1,400

when you upgrade  
to a high-efficiency  
furnace, boiler or  
water heater.

**Customers can earn rebates up to \$1,400 when you combine Elizabethtown Gas rebates with New Jersey's Clean Energy Program rebates.**

Offer valid through 7/31/2017 unless earlier revised or terminated. While supplies last. Certain restrictions apply. Offers subject to terms and conditions. Visit [elizabethtowngas.com](http://elizabethtowngas.com) for details.

# Conservation tips

Conserve energy use and save money

## Heating & cooling

- Install a programmable thermostat to automatically adjust your home's temperatures for when you're away or at work.
- Program your thermostat for 78°F in the summer and 68°F in the winter.
- Clean or replace air filters regularly.
- Get a seasonal heating system checkup to ensure system is operating at peak performance.
- Add insulation to the attic.
- Keep shades open on the sunny side of the house during winter and closed during summer.

## Water heating

- Lower your water heater's temperature setting to 120°F.
- Adding insulation to your water heater and any exposed pipes can knock up to 15% off the costs of heating water. Never put insulation on the top or near the bottom of the heater, wrap it around the sides.
- Fix leaky faucets and install faucet aerators and low flow showerheads.
- Time your showers to 4-5 minutes. Shortening your shower time by 1-2 minutes can save about 150 gallons of water per month.

## Cooking

- Match the cooking method to the meal – small burner for small pan (for example, a 6" pan over an 8" burner wastes 40% of the heat).
- Keep bottom of pan and burner surfaces clean to reduce the energy needed to heat food.
- Minimize the number of times you open an oven door during cooking. Each time it's opened, you lose between 25-50°F.
- Turn off heat in oven just before food is done.
